

Addressing four dimensions of sustainability

Circularity
Food systems
 Climate
 Biodiversity

THE CHALLENGE

800 million
 go to bed hungry*

Still more than **1/3** of food grown and produced is lost or wasted**

Aseptic carton packages are essential for protecting perishable foods and enabling food access

Building more sustainable Food Systems

- Global food systems transformation
- More sustainable food***
- New food sources

TAKING ACTIONS

GOING FURTHER TOGETHER

Increasing access to safe food

Aseptic cartons enable food to reach remote areas due to extended shelf life

66M school children in 44 countries received milk and other nutritious beverages in Tetra Pak cartons in 2022

Since 2011, Tetra Pak has supported 22 Dairy Hub projects around the world reaching >67,000 farmers

Innovating food processing creating nutritious, sustainable ingredients such as alternative protein

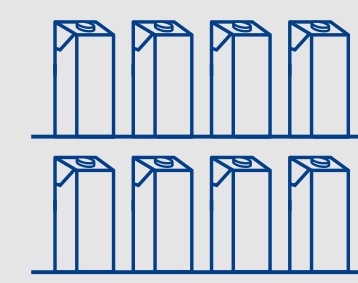

Expand participation in existing School Feeding Programmes and Dairy Hubs

Reducing food loss and waste

Reducing food loss in manufacturing

Turning side-streams into value added-ingredients

Aseptic cartons extend shelf life of perishable foods, keeping them safer for longer

Collaborating to innovate and reduce food loss and waste

Investing in new technologies to further reduce food waste

New food sources

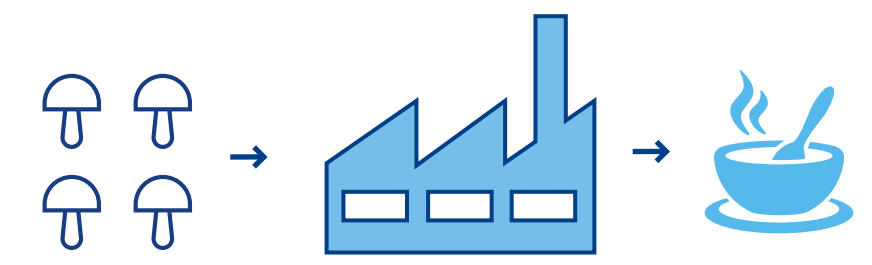

Teaming up with innovation partners

Exploring new nutrient sources through our Product Development Centers

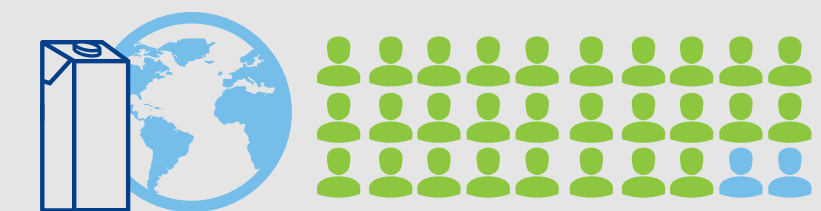

Developing alternative protein-based food applications

Explore biomass and precision fermentation, new food fermentation, to deliver the foods of tomorrow

Food safety

Aseptic cartons protect food, making it safe and available for more of the world's growing population, even in remote areas

Continuing to invest in innovations on food safety as part of our processing and packaging innovations

As an industry, we need to look to the whole food value chain and transform the way food is grown, processed, packaged and consumed,

Let's GO further.

Go nature. Go carton.
